DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with John Altmillar on March 18, 2004.

1. The application has been amended as follows: the phrase – and a rotating mechanism to rotate said probe – is added between the word “sample” and “so” in line 14 of claim 4.
2. The application has been amended as follows: the word “of” in the last line of claim 3 (line 16 of the claim) is replaced with the word – or –.

Allowable Subject Matter

3. The following is a statement of reasons for the indication of allowable subject matter. Claim 1 and 4-15 are allowable.

Independent claim 1 is allowable because the prior art of record fails to teach or fairly suggest an apparatus or means for a minute sample processing apparatus comprising, a mechanism for rotating said probe so that a section of the cut-out minute sample becomes substantially perpendicular to an optical axis of said electron beam, in combination with the other recited limitations in the claim.

Art Unit: 2881

Independent claim 3 is allowable because the prior art of record fails to teach or fairly suggest an apparatus or means for a minute sample processing apparatus comprising, a rotating mechanism to rotate said probe so that a section of the minute sample becomes perpendicular to an application direction of the ion beam or electron beam, in combination with the other recited limitations in the claim. Claim 5 is allowable by virtue of its dependence on claim 3.

Independent claim 4 is allowable because the prior art of record fails to teach or fairly suggest an apparatus or means for a minute sample processing apparatus comprising, a rotating mechanism to rotate said probe so that a section of the minute sample becomes perpendicular to an application direction of the ion beam or electron beam, in combination with the other recited limitations in the claim.

Independent claim 6 is allowable because the prior art of record fails to teach or fairly suggest an apparatus or means for a minute sample processing apparatus comprising, a mechanism for moving and rotating said probe so that a section of the minute sample becomes perpendicular to an application direction of the ion beam or electron beam, in combination with the other recited limitations in the claim.

Independent claim 7 is allowable because the prior art of record fails to teach or fairly suggest an apparatus or means for a minute sample processing apparatus comprising, a mechanism for moving and rotating said probe so that a section of the minute sample becomes perpendicular to an application direction of the ion beam or electron beam, in combination with the other recited limitations in the claim.

Independent claim 8 is allowable because the prior art of record fails to teach or fairly suggest a method or means for, a minute sample processing method for observing a

Art Unit: 2881

section of a sample using a minute sample processing apparatus which comprises, changing attitude of said minute sample by rotating said probe with a condition that said minute sample is being lifted so that a section of the minute sample becomes perpendicular to an application direction of the ion beam or electron beam, in combination with the other recited limitations in the claim. Claims 9-11 are allowable by virtue of their dependence on claim 8.

Independent claim 12 is allowable because the prior art of record fails to teach or fairly suggest an apparatus or means for a minute sample processing apparatus comprising, a rotating mechanism to rotate said probe holder so that a section of the separated sample piece becomes perpendicular to an application direction of the charged particle beam, in combination with the other recited limitations in the claim.

Independent claim 13 is allowable because the prior art of record fails to teach or fairly suggest an apparatus or means for a minute sample processing apparatus comprising, rotating said needle member so that a section of the separated sample piece becomes perpendicular to an application direction of the charged particle beam, in combination with the other recited limitations in the claim. Claim 14 is allowable by virtue of its dependence on claim 13.

Independent claim 15 is allowable because the prior art of record fails to teach or fairly suggest an apparatus or means for a minute sample processing apparatus comprising, rotating said first and second probe holders so that a section of the separated sample piece becomes perpendicular to an application direction of the first or second charged beam, in combination with the other recited limitations in the claim.

Art Unit: 2881

Conclusion

1. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Tomimatsu et al. (6,538,254 and 2003/0183776) both teach a similar device as taught by Tomimatsu et al. (EP 0 927 880) which was previously discussed during prosecution.
